

## DDMS – DRAWING AND DOCUMENT MANAGEMENT

*At x-Spatial, we understand the business value of your data and the business processes you need to support.*

*We have worked with airport operators and owners to develop software solutions for large, complex infrastructures.*

*Our solutions build on open standards and open database access to make sure they work easily with any systems you already have in place.*

Use a single, authoritative repository for storing and organizing electronic documents linked to your geospatial data. Retrieve drawings, images or documents related to a feature by running a simple spatial query. Secure access from any location means people are working with timely and appropriate information.

### Features

- Select a feature on a map to retrieve all associated documents
- Quickly link documents with any geospatial feature, project area, land parcel, or grid reference
- Centralized repository for office documents, graphics, photos and geospatial data
- Supports both standardized and custom metadata
- Classify documents according to company taxonomy
- Use “document sets” to manage related information sources

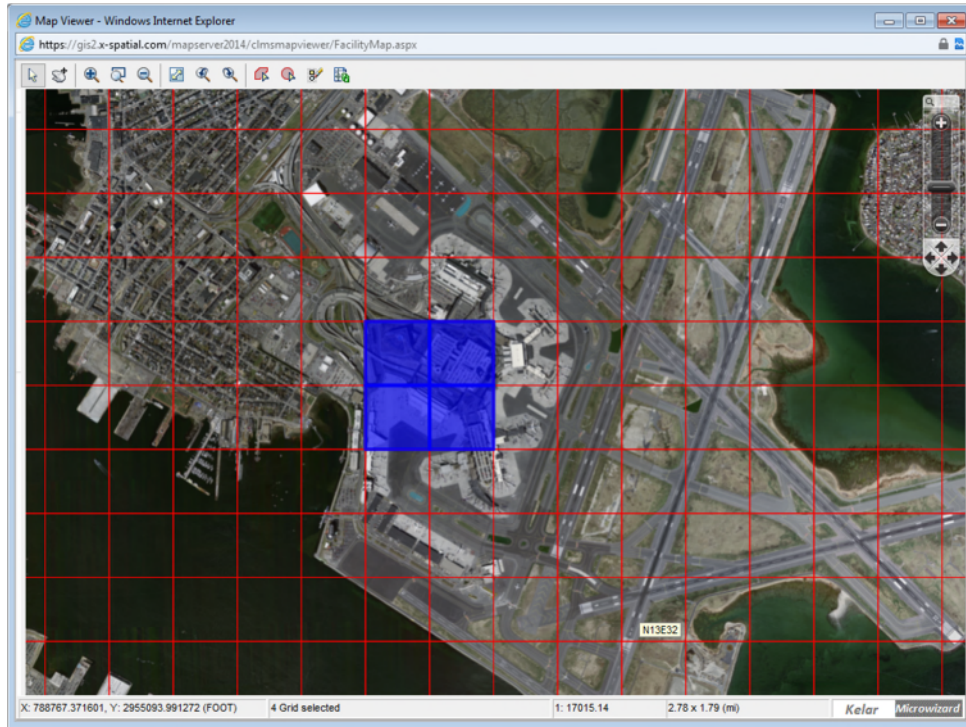

### Benefits

- Improved, faster and more flexible search
- Access latest, business critical drawings and documents
- Improved data security
- Easy integration with all x-Spatial modules
- Multiple, simultaneous user access in familiar web-based environment
- Flexible document categorization and access via “File Explorer” like interface
- View airport maps, related drawings, documents, and parcel or tenant info within the same window
