

GDMS – GEOSPATIAL DATA MODELING SYSTEM

At x-Spatial, we understand the business value of your data and the business processes you need to support.

We have worked with airport operators and owners to develop software solutions for large, complex infrastructures.

Our solutions build on open standards and open database access to make sure they work easily with any systems you already have in place.

A platform independent spatial based application that allows for CAD & GIS application to access and edit the same entities while retaining true fidelity and attributes specifically designed to store and disseminate data depicting Facilities, Infrastructure and Environment.

Features

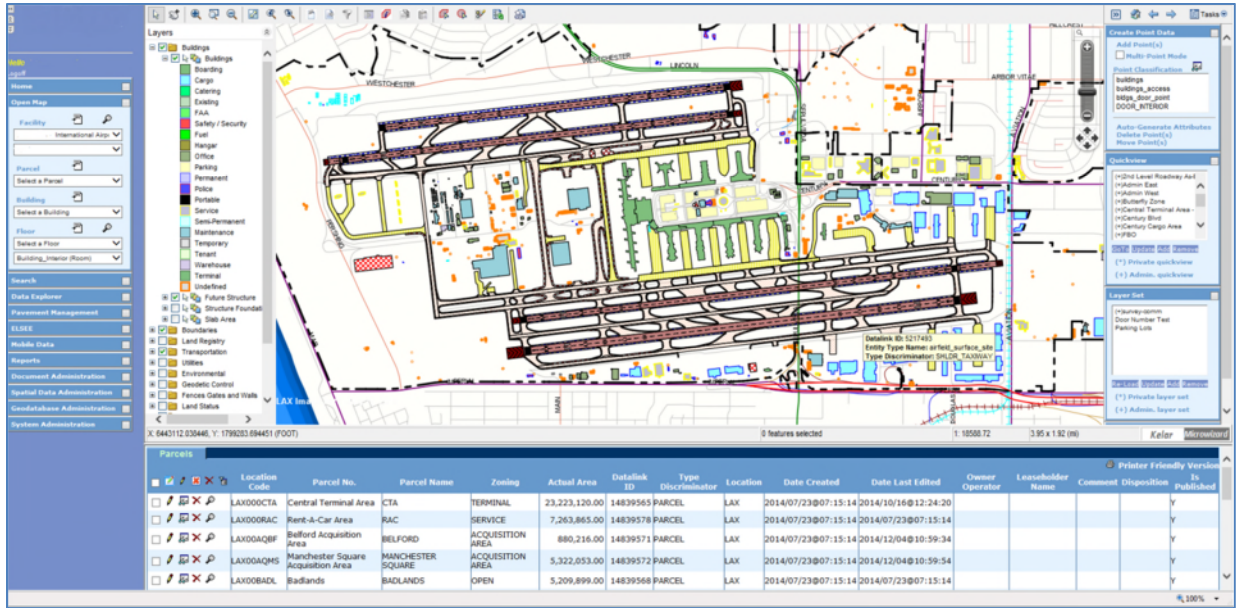

- Select a feature on a map to retrieve all associated documents
- Direct access to your latest geospatial data
- Integrates all data types
- Intuitive, adaptable interface allowing end users to create their own quick views, layer sets and document sets that match their needs
- Enforces enterprise data standards during data creation and updates
- Easily configurable for new datasets, classes and type as your geospatial database expands
- Open and Standardized Architecture allows for easy integration with other software system
- All in one solution for airside and inside buildings
- Full support for FAA AC 5300/18b data standard

Benefits

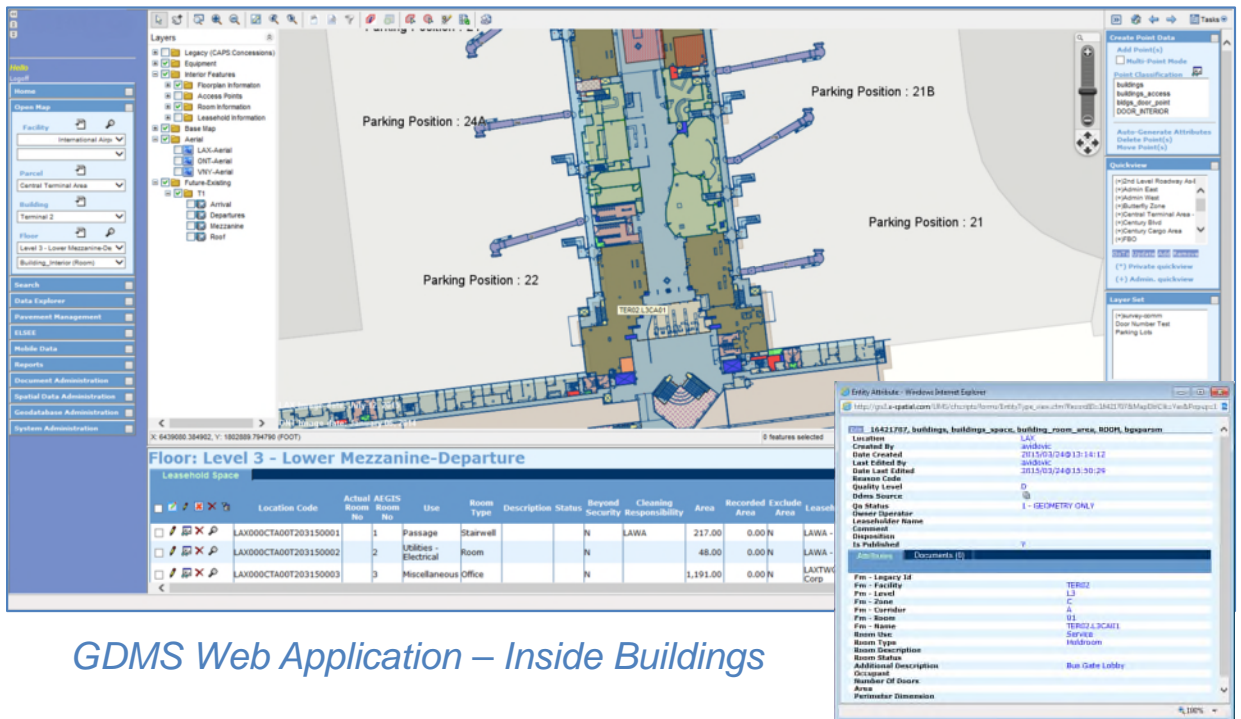

- Seamless integration of CAD and GIS data
- Retention of data in their native format
- Autodesk and ESRI design foundation
- Ideal for organizations that leverage both CAD and GIS
- Fully configurable and customizable
- Guaranteed data integrity
- Intuitive and user friendly administration
- Increased productivity
